Description

Parallel programmer for 5V-logic flash memory of some 29, 39 and 49 series chips.

The PLCC32 socket is available as well as DIP32. TSOP32 chips can be programmed using an adapter (TSOP32 to DIP32 adapter will be send with a programmer). Functions: manufacturer and chip ID detection, reading, saving to a bin file, erasure, writing flash from file, verification.

Before buying, look attentively through the supported chips list, please.

If you need to program a chip that is not present in the list - look among other our products for another programmer or inform us in order we could add it to next version.

The link to download driver, software (Windows only) and pdf manual will be send along with the programmer.
